

# AngularJS Exercises

Files uploaded to: <https://github.com/henrikwebdev/AngularJS-Exercise>

## Exercise 1. What is Angular.js and what can it be used for?

AngularJS is a JavaScript framework for developing web applications. AngularJS extends the HTML and makes the DOM interactive by manipulating the DOM, binding events and using two-way data binding. AngularJS is designed around the MVC – Model View Controller architecture.

## Exercise 2. Make an Angular example where you uses Directives, Expressions and a Controller

Project uploaded.

## Exercise 3. Make an Angular example that reads a JSON feed.

Project uploaded.

## Exercise 4. Make a Angular application where you have converted the Account javascript object from day 4 (JS OOP) into a Controller (accountControl.js)

Project uploaded.

## Exercise 5. Try to learn Angular-js from Codeschool:

<http://campus.codeschool.com/courses/shaping-up-with-angular-js/intro>  
What do this about this way of learning?

Very good combination of learning and practicing with challenges.
